dorsata Honey

The finest natural honey from the Sundarban

The Sundarban, a UNESCO world heritage site and the largest mangrove ecosystem on the planet. A land of bewitching beauty, it is home to over 200 species of birds and animals. A trip to Sundarban will keep you on the edge of your boats, thinking of what you might see next.

From the heart of this undiscovered paradise we bring you,
The Dorsata Honey...

The Dorsata honey has all the nutritional benefits of natural honey. But what makes it different is its delicate unique taste and aroma, that you will never forget. Give it a try and delight your taste buds with the taste of pure Mangrove honey.

The Dorsata honey is produced by the giant honey bee (*Apis dorsata*) which are native to the geography. The Dorsatas are aggressive and can not be bred through beekeeping methods. The result is an uninterfered life-cycle of the bees and a honey produce that is natural, unique and a must-try for you.

The Dorsata honey is also an effort to empower the economy of the 'mouli' who live and risk their lives hunting honey in the Sundarban forest.

Badabon Harvest helps these communities by creating a direct distribution channel between the 'moulis' and you, so that they can get the most profit for all the risk and hard work they go through.
